CERTIFIED TREES AND VINES

In keeping with our policy to produce nursery stock second to none in quality and reliability, we are offering this year for the first time CHERRY TREES and THOMPSON SEEDLESS GRAPES which are certified by the State Department of Agriculture to be free from all known viruses. State pathologists believe you will be surprised and pleased by the uniform vigor and productivity of certified stock.

In the future, as other fruits are added to the State Certification Program, we expect to continue to be among the first to have stock that meets the rigid certification requirements.

Come in and talk over your planting problems with us. Our field men are always available to inspect your land and give you conscientious advice. Starting right — by proper preparation of land, and then selecting the best varieties and rootstocks for your own conditions is the foundation of success in orcharding.

TERMS OF SALE

DELIVERY. Our trucks run throughout the San Joaquin and Sacramento Valleys. Truck deliveries are made without charge in this area. If necessary to ship your order by rail or motor express, we ship collect, and make no charge for packing. Growers are more than welcome to call and take delivery of their orders at our salesyard. Our shipping and delivery season runs from December until the last of March.

QUALITY and CONDITION. If any defective trees or vines are found which may have escaped our graders; or if any stock arrives in defective condition, we must be notified within ten days. We will then replace, or refund the purchase price of such defective trees or vines.

TERMS and PRICES. Prices quoted are net cash. All prices are subject to change without notice. Interest at 7% on past due accounts.

INSPECTION. California State Law provides that all nursery stock must be inspected by County Agricultural Commissioner at county of destination immediately upon receipt thereof.

LIABILITY. We use every care in the selection of budwood and the growing of nursery stock in order to have it true to name. We will replace, or refund the purchase price for any stock which may prove untrue. Our liability for this, however, or any other cause whatever, is limited to a sum no greater than the original purchase price.

MONEY MAKERS 1960

The **ROSE** and **MARIGOLD** crops this year from our own orchards were both sold for canning at \$85 per ton, roadside. In the Fresno area most of the fruit of Rose was sold for freezing at \$87.50 per ton. The Marigolds in the Fresno area were packed for shipment, and brought from \$2.50 to \$2.75 F.O.B. per L.A. Lug.

But the grower who made the most outstanding record again this year for his Rose nectarines was Mr. Jos. Olivera of Denair. Mr. Olivera's production from one acre (102 trees) planted in 1955 was thirteen tons. His average price received for all sizes was 10c per pound; giving a gross return of \$2600!

The Rose is a good consistent producer. We have been observing it for eight years, and it has never failed to set a good crop. In appearance it is one of the most beautiful of nectarines. It is a white flesh freestone, ripening early July. The Rose is one of the very few fruits that has three separate market outlets—canning, freezing and fresh shipment. We planted an additional fifteen acres on our own ranch this year—feeling that with so many commercial uses for the fruit it will be years before the supply catches up with the demand.

The Marigold has two distinct outlets—canning and fresh shipment. It is an extra large, yellow flesh freestone, ripening about August 10th. We have 21 acres Marigolds—ranging from three to five years old; and if production and returns to date can be taken as an indication, this fine large nectarine will be one of our best moneymakers.

The royalties on the Rose (Plant Patent No. 1421) and Marigold (Plant Patent No. 1724) are \$1.50 per tree. The Marigold is sold in lots of 100 or more trees only.

THE MERCED ALMOND

Since its introduction by us two years ago, demand among growers for the Merced Almond (Plant Patent No. 1730) has been rapidly increasing. During the past two seasons more than 30,000 Merced trees have been set out in orchards from one end of the valley to the other. In addition, several thousand trees of less desirable varieties have been topworked in the orchard to Merced.

The outstanding features of the Merced are:

1. Early and heavy bearing.
2. Paper shell with high cracking percentage.
3. A perfect pollinizer for Nonpareil—blooming at the same time.
4. Top market price, comparable with Nonpareil. (Based on cracking %).

Leading growers agree that Merced is the best variety ever introduced to go with Nonpareil. Most new plantings are in the ratio of two rows Nonpareil to one Merced. (Royalty 50c per tree).

THE GIANT BABCOCK PEACH

The new Giant Babcock (Plant Patent No. 1353) has impressed us more than any other peach we have seen for some years. As its name implies, it is very similar to Babcock, but considerably larger. The skin is beautifully colored and the flesh is firm. The flavor is equal to that of Babcock. Ripening time is about one week later than Babcock. Marketwise this is a particularly advantageous time for any fruit to ripen, as it reaches the market after the Kim Elberta and Red Globe, but before the J. H. Hale and other peaches of that season. This year the Giant Babcock fruit sold for a higher price in the Los Angeles market than any other peach—the largest sizes bringing up to \$5 per L.A. lug, and all sizes brought very good returns. (Price \$2.50 per tree, including Royalty).
